

ACAPULCO

RENOVATIONS

Before

After

Your pool has served the community well for many years, but after several decades of service it's starting to show its age both cosmetically and functionally; see if any of the comments below seem familiar:

The deck has settled or shifted and now has raised edges that are a safety concern.

Water pools in areas of the deck.

The pool plumbing has developed leaks and ongoing and repeated repairs are eating away at your annual budget.

The concrete has cracked or pieces fall off the walls.

We don't have enough skimmers to keep the pool clean.

Our skimmers have 'equalization lines' and vacuum ports that we understand from the health department are dangerous.

We only have one main drain in the pool, or custom or antiquated drains that we can't find replacements for.

We have a really old DE filter system that is becoming more difficult to maintain, and the operators have health and safety concerns.

The pump and filter are way too small to meet current health code requirements

Our return fittings are really low in the pool water and need to be upgraded. Some return lines have been abandoned because the line is leaking.

Our plumbing is steel, and puts rust in the pool. It is also leaking more all the time.

The pool is looking really dated; the finishes and coping look aged. The deck equipment is badly rusted or damaged.

The water is always cloudy.

We have to back wash way more often than we used to.

There are loose and missing tiles everywhere! We keep replacing them, but the pool is starting to look like a poorly made quilt!

We are getting sand in the pool from the filters.

After

Acapulco can help! We have been around a long time (almost 50 years) and some of the 'old' pools we may have actually built. The great thing about concrete pools, is that they can almost always be made like new for a lot less capital outlay than building a new pool!

We have the expertise and experience to:

Assess the current condition of the pool and mechanical system and make recommendations to provide the best possible value.

Add or upgrade filtration systems

Replace the plumbing and fittings

Replace the coping and pool finishes (tile, plaster, concrete, stone, epoxy paint, etc.)

And more!

THORNHILL OUTDOOR SWIMMING POOL

Thornhill, Ontario

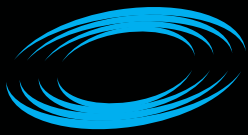

In June 2014, Acapulco Pools completed the renovation project at the Thornhill Outdoor Swimming Pool in Thornhill, Ontario.

This project consisted of a complete pool tank refurbishment including concrete repairs, the removal of tile from the deck line and the painting of the entire pool tank.

Acapulco completed the mechanical upgrades needed to maintain a safe and healthy aquatic environment. Upgrades were provided to the underground mechanical system and in the pool's mechanical room. New perimeter piping was installed along with co-compliant accessibility ramps and a newly renovated pool deck!
